

WHAT IS CLAIMED IS:

1. A lubricant composition comprising:
a major amount of a base stock of lubricating viscosity; and
5 a minor amount of an additive combination including
 - (i) a mixture of mono and dialkylated diphenylamine and mono and dialkylated phenothiazines having alkyl groups of 4 to 10 carbon atoms
10 wherein the alkylated phenothiazines comprise at least 20 wt% of the mixture with 15 to 85 wt% of the alkylated phenothiazines being mono alkylated;
 - (ii) an ashless anti wear additive; and
 - 15 (iii) an ashless rust inhibitor.
2. The composition of claim 1 wherein the ashless antiwar additives are phosphorous containing compounds.
- 20 3. The composition of claim 2 wherein the rust inhibitors are organoesters, amides, amines, sulfonates and carboxylates.
4. The composition of claim 3 including a metal corrosion inhibitor.
- 25 5. The composition of claim 4 wherein the composition comprises 0.2-2 wt% of the liquid mixture, 0.05-5 wt% of the antiwear additive and 0.01 to 2 wt% of the rust inhibitor.
6. The composition of claim 5 including 0.0 to 0.5 wt% of a metal
30 corrosion inhibitor.

7. The composition of claim 6 wherein the basestock is a mixture of two or more oils of lubricating viscosity.

5 8. The composition of claim 7 wherein one of the oils is selected from the group consisting of paraffinic oils having less than 10 wt% aromatics, slightly branched paraffinic base oils derived from gas to liquid processes, and synthetic alkylated aromatic oils.
